

Why GoCloudID & What It Can Do For You

GoCloudID is a cloud-based, multi-modal biometric identity management platform that puts reliable, simple, and cost-effective identity verification onto your mobile applications so that you can provide fraud prevention and identity protection for your customers.

Benefits:

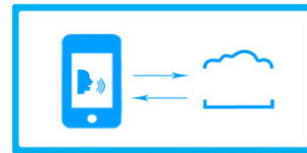

- Full (biometric and biographic) and anonymous identity management
- Rapid development and deployment of customized standard-based identity solutions
- Dynamic scalability allows for the space maximization of web and mobile applications
- Easily reconfigured to adapt to customer requirements and emerging technology
- Rapid integration with new and existing applications
- Supports a pay-as-you-go model

Biometric identity management as a service

Integrated interactive messaging and biometric verification

Interactive messaging for mobile applications as a service

GoCloudID Offering

IWS CloudID provides a level of modularity, interoperability and massive scalability, from mobile devices to large-scale databases, which were previously unavailable in the biometrics and credentialing marketplace.

- It supports enterprise class biometric identity management solutions for datasets in the hundreds of millions.
- It extends the flexible technology and vendor independent “plug-in” approach Imageware invented for biometric applications across the entire identity platform, creating a layered, highly modular product suite.
- It achieves optimal performance whether delivered as part of networked server computing solutions or embedded in cloud-based services.

About ImageWare Systems

ImageWare® Systems, Inc. (IWS) is the leader in multi-modal biometric identity management, with patented technologies securing the private and public sectors for over a decade. Our innovative products such as *GoCloudID*® and *GoMobile Interactive*™ provide scalable, reliable, simple and fast identity solutions across a variety of platforms.
