

IMAGEWARE® SYSTEMS

GoVerifyID®

Accelerating your Authentication Journey with a Continuum of 2FA, Biometrics, and MFA

Add 2FA, Biometrics, and MFA to the ForgeRock® Identity Platform™

ForgeRock®, Inc. is the Digital Identity Management company transforming the way organizations interact securely with customers, employees, devices, and things. Organizations adopt the ForgeRock Identity Platform™ as their digital identity system of record to monetize customer relationships, address stringent regulations for privacy and consent (GDPR, HIPAA, FCC privacy, etc.), and leverage the internet of things. ForgeRock serves hundreds of brands, including Morningstar, Vodafone, GEICO, Toyota, TomTom, and Pearson, as well as governments like Norway, Canada, and Belgium, securing billions of identities worldwide.

ImageWare's GoVerifyID is integrated with the ForgeRock Identity Platform to provide Two-Factor Authentication (2FA), Biometric Authentication, and Multi-Factor Authentication (MFA) for all ForgeRock managed systems. This integration, which has been validated by ForgeRock, enables users to simply take a selfie, swipe a finger, show their palm, or speak a phrase to authenticate their identity. Organizations can also select to have user enter a PIN, accept a secure push notification, or use other second factor methods to gain access.

Organizations can select the appropriate authentication method to meet the required level of security for different users, systems, and use cases. The level of security can also be increased at any time, such as by adding biometric factors.

Benefits

- Data breach protection
- High identity assurance
- Streamlined user login
- Software as a Service
- Quick and easy set-up

Features

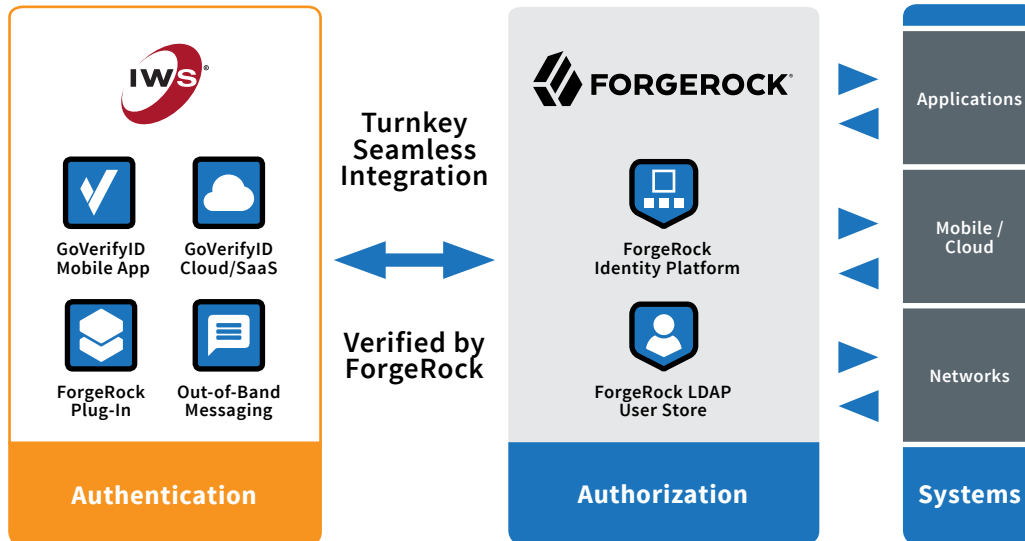

- Seamless integration
- 2FA, MFA, and biometrics
- Centralized storage & matching
- Anonymous storage
- Mobile access

FORGEROCK
VERIFIED

ForgeRock and GoVerifyID. Better Together.

Together, ImageWare's GoVerifyID and the ForgeRock Identity Platform provide multi-modal two-factor, biometric, and multi-factor user authentication and single sign-on for all your applications and systems. Flexible, mobile biometric authentication, combined with secure system access, provides the ultimate in security and user experience. Seamless integration and cloud deployment allows your users to instantly access all their apps by simply taking a selfie, swiping a finger, showing their palm, speaking a phrase, entering a PIN, or using other 2FA methods.

GoVerifyID provides 2FA, Biometrics, and MFA for the ForgeRock Identity Platform

User Provisioning:

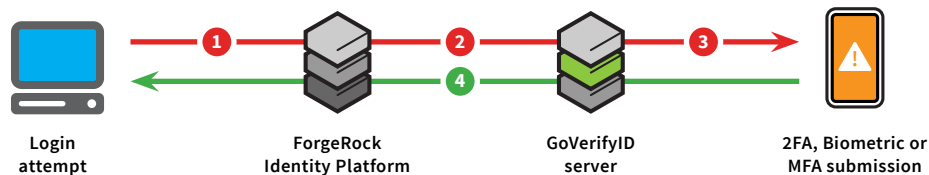

- The ForgeRock Identity Platform is configured to point to the ImageWare GoVerifyID system in our SaaS, your cloud, or on premises.
- Users are automatically provisioned from the ForgeRock Identity Platform to GoVerifyID.

Authentication Workflow:

- The ForgeRock drag-and-drop Authentication Tree Designer is used to configure the desired 2FA, biometric, and MFA workflows for end users.
- The ForgeRock Identity Platform automatically redirects authentication requests to GoVerifyID.

Mobile 2FA, Biometric Authentication, and MFA: How it works

- 1 The user attempts to log into an application managed by ForgeRock.
- 2 The ForgeRock server pings the GoVerifyID server for an authentication request.
- 3 The user is asked to submit their 2FA, biometric, or MFA information for authentication..
- 4 Based on the results from the servers, the user login request is approved or denied.
