GoVerifyID®

FOR MSSP & IT SERVICE BUSINESSES

New Revenue Opportunities and Increased Security for MSSP & IT Service Businesses

MFA is a \$17.7 Billion Market by 2025

2FA, Biometrics, and MFA for IT Service Businesses

GoVerifyID enables Managed Security Service Providers (MSSPs) and IT Service organizations to quickly, easily, and inexpensively add a continuum of Two-Factor Authentication (2FA), Biometrics, and Multi-Factor Authentication (MFA) to their existing security infrastructure, applications, networks, systems, and devices. ImageWare's GoVerifyID Enterprise Suite is a family of end-to-end, 2FA, Biometric, and MFA products providing turnkey solutions for all the leading user authentication security ecosystems.

For cloud environments, GoVerifyID provides seamless integration with the leading hosting systems, including Linux, LDAP, ForgeRock, Active Directory, and more. For customer infrastructure, GoVerifyID has out-of-box integrations with the leading enterprise systems, including Microsoft Active Directory, Windows, Linux, and MacOS and leading Single Sign-On solutions from CA, ForgeRock, HPE, IBM, SAP, and others.

Users can authenticate using their mobile devices or PCs via face, voice, palm, and fingerprint recognition with advanced anti-spoofing capabilities as well as secure, out-of-band, push notifications, and PINs. The biometric and second factor authentication methods can be selected to meet the security level desired, or users can be allowed to select the most convenient method.

GoVerifyID enables organizations to select the authentication methods appropriate for the required security requirements.

End-User Features

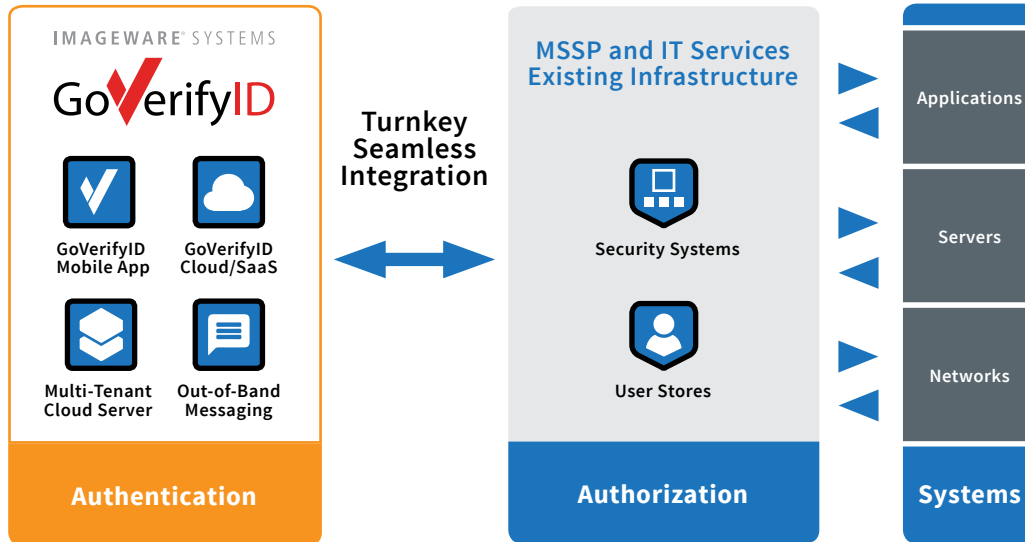

- Convenient Streamlined User Experience
- Choice of 2FA, Biometrics, and MFA
- Mobile Authentication App for All Systems
- Use your Existing PCs & Mobile Devices
- Centrally Managed using Standard Tools

Partner-Ready Features

- Certified Integration with Leading Security Systems
- Highly Scalable, Multi-Tenant Cloud SaaS Model.
- Turnkey 2FA, Biometrics, and MFA Solutions
- Easily Rebrand-able Mobile Authenticator
- Open REST APIs for any Custom Integration

GoVerifyID and IT Services. Better Together.

ImageWare's GoVerifyID combined with your existing IT Service platforms provides two-factor, biometric, and multi-factor user authentication for all your applications and systems. Flexible, mobile biometric authentication, combined with secure system access, provides the ultimate in security and user experience. Seamless integration and cloud deployment allows your users to instantly access all their apps by simply taking a selfie, swiping a finger, showing their palm, speaking a phrase, entering a PIN, or using other 2FA methods.

GoVerifyID provides 2FA, Biometrics, and MFA for MSSP and IT Services Infrastructure

MSSP Use Cases:

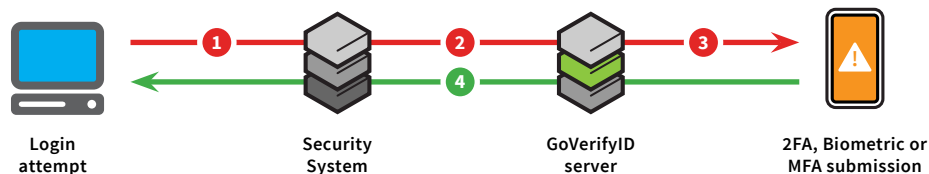

- Access to Data Centers
- Login for Hosted Systems
- Customer Access to Services
- Securing Customer Portals
- Authentication for Mobile Apps
- Security between Tenants
- Self-Service Password Reset

IT Services Use Cases:

- Strong Security for all Client and Server Computers
- MFA for access to specific cloud or hosted applications
- Biometric MFA for high risk business case scenarios
- Step-Up Authentication for Suspicious Behaviors
- Biometric authentication for custom mobile apps
- Turnkey integration with Active Directory, Linux, LDAP
- Integrate to nearly any system using SAML, SCIM or REST

Mobile 2FA, Biometric Authentication, and MFA: How it works

- 1 The user attempts to log into any system managed by GoVerifyID Enterprise Suite.
- 2 The security system pings the GoVerifyID server for an authentication request.
- 3 The user is asked to submit their 2FA, biometric, or MFA information for authentication.
- 4 Based on the results from the servers, the user login request is approved or denied.
